Section B

Q4. Case Study

(20 Marks) CO5, CO6

FreshGlow Consumer Care

FreshGlow Consumer Care is a mid-sized FMCG company specializing in personal care products such as soaps, shampoos, lotions, and face washes. Over the past five years, the company expanded rapidly by introducing multiple variants within each product line—herbal soap, charcoal soap,

moisturizing soap, medicated soap, and premium fragrance soap. Similarly, its shampoo line included anti-dandruff, hair fall control, herbal, protein, and color-protection variants.

Initially, this expansion increased shelf visibility and attracted different customer segments. However, recent sales reports showed stagnating revenue despite a growing number of SKUs. Retailers complained about limited shelf space and slow-moving variants. The production team highlighted rising manufacturing and inventory costs due to maintaining too many product variants. Marketing managers also noticed that customers were confused by the excessive choices, often switching to competitors offering simpler product lines.

The management team conducted a product mix analysis focusing on width (number of product lines), length (total number of items), depth (variants within each line), and consistency (how closely related product lines are). The analysis revealed that FreshGlow had excessive depth in certain categories and low turnover for niche variants. Further, some products cannibalized sales of core bestsellers rather than attracting new customers.

To address this, the company considered rationalizing its product mix by eliminating low-performing variants, strengthening top-selling products, and introducing bundled offerings for retailers. The product manager also proposed launching a premium sub-brand to capture high-end consumers without overcrowding the existing portfolio. The leadership now faces a strategic decision: whether to streamline the current mix or continue expanding to cover every possible segment.

Answer the following questions:

Q.1-Analyze FreshGlow's product mix strategy using the concepts of width, length, depth, and consistency. What key problems do you identify?

Q.2-If you were the product manager, what specific product mix decisions would you recommend to improve profitability and market clarity?
